IN THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application.

- 1. (Previously Presented) A mask, comprising a heat generating unit incorporated therein, wherein said heat generating unit is configured to generate heat by chemical reaction, wherein said heat generating unit comprises an exothermic composition containing a metal powder, salt, and water, which heat generating unit releases steam in conjunction with oxidation reaction of said metal powder.
- 2. (Original) The mask according to claim1, having a moisture-retaining unit, separate from said heat generating unit.
 - 3 -5. (Canceled)
- 6. (Original) The mask according to claim 1, wherein said heat generating unit is configured to be attached and detached.
- 7. (Original) The mask according to claim 1, further comprising a temperature buffering between said heat generating unit and a face when said mask is donned.
 - 8. (Original) The mask according to claim 1, further having a drug carrier unit.
- 9. (Original) The mask according to claim1, wherein said heat generating unit comprises an exothermic composition with a drug dispersed in said exothermic composition.
- 10. (Currently Amended) The mask according to claim 1, further comprising a bag containing the exothermic composition, which bag has a surface adapted to be applied to a face, and which bag comprises a moisture permeable sheet exhibiting a moisture permeability between about 1000 g/m² 24h and about 13,000 g/m² 24h according to JIS Z0208 method

Serial No. 09/783,548 Reply to Office Action of May 9, 2003

under conditions of a temperature of 40 C and relative humidity of 90%, and an air permeability of 200 seconds/100 cm³ or less according to JIS P8117 method.

- 11. (Previously Presented) The mask according to any one of claims 1-2 and 6-10, wherein main mask body is provided with at least one of an inhalation valve and an exhalation valve.
- 12. (Original) The mask according to claim 11, wherein an inhalation valve and an exhalation valve are provided separately in said main mask body.
- 13. (Original) The mask according to claim 11, wherein an inhalation/exhalation valve is provided in said main mask body.
- 14. (Original) The mask according to claim 1, configured to have a space and distance between said heat generating unit and a face when said mask is donned.
 - 15. (Previously Presented) A mask comprising: a main mask body; and

heat generating means for generating steam in said main mask body by an exothermic oxidation chemical reaction.
